Order from LC or SLA ml\$2. 40, ph\$3. 30 61-13999

Trans. of Bumazhnaya Promyshlennost' (USSR) 1958, v. 33, no. 5, p. 10-13.

Discussions are presented on the effect of water hardness (total, and carbonate), of the cations and the anions of the salts giving rise to the hardness, and also of the cations Na^+ , NH_4^+ , Al^{3+} on the beating of cellulose and on the texture and the properties of paper. The dependence of the cellulose grinding process on the pH of the medium was also studied, since changes in the concentration of dissolved electrolytes induced changes in the hydrogen ion exponent.
